logic of sense is one of deleuze s seminal works first published in 1969 shortly after difference and repetition it prefigures the hybrid style and methods he would use in his later writing with felix guattari in an early review michel foucault wrote that logic of sense should be read as the boldest and most insolent of metaphysical treatises the book is divided into 34 series and five appendices covering a diverse range of topics including sense nonsense event sexuality psychoanalysis paradoxes schizophrenia literature and becoming and includes fascinating close textual readings of works by lewis carroll sigmund freud seneca pierre klossowski f scott fitzgerald and Émile zola logic of sense is essential reading for anyone interested in post war continental thought

this book defines a logical system called the protocol theoretic logic of epistemic norms plen it develops plen into a formal framework for representing and reasoning about epistemic norms and it shows that plen is theoretically interesting and useful with regard to the aims of such a framework in order to motivate the project the author defends an account of epistemic norms called epistemic proceduralism the core of this view is the idea that in virtue of their indispensable regulative role in cognitive life epistemic norms

are closely intertwined with procedural rules that restrict epistemic actions procedures and processes the resulting organizing principle of the book is that epistemic norms are protocols for epistemic planning and control the core of the book is developing *pln* which is essentially a novel variant of propositional dynamic logic *pdl* distinguished by more or less elaborate revisions of *pdl*'s syntax and semantics the syntax encodes the procedural content of epistemic norms by means of the well known protocol or program constructions of dynamic and epistemic logics it then provides a novel language of operators on protocols including a range of unique protocol equivalence relations syntactic operations on protocols and various procedural relations among protocols in addition to the standard dynamic modal operators of *pdl* the semantics of the system then interprets protocol expressions and expressions embedding protocols over a class of directed multigraph like structures rather than the standard labeled transition systems or modal frames the intent of the system is to better represent epistemic dynamics build a logic of protocols atop it and then show that the resulting logic of protocols is useful as a logical framework for epistemic norms the resulting theory of epistemic norms centers on notions of norm equivalence derived from theories of process equivalence familiar from the study of dynamic and modal logics the canonical account of protocol equivalence in *pln* turns out to possess a number of interesting formal features including satisfaction of important conditions on hyperintensional equivalence a matter of recently recognized importance in the logic of norms generally to show that the system is interesting and useful as a framework for representing and reasoning about epistemic norms the author applies the logical system to the analysis of epistemic deontic operators and partly on the basis of this establishes representation theorems linking protocols to the action guiding content of epistemic norms the protocol theoretic logic of epistemic norms is then shown to almost immediately validate the main principles of epistemic proceduralism
